NOTES:

- **Deviations from this procedure shall have prior written approval of the Sealing Engineer.**
- **The Construction Supervisor will be the Person in Charge. The Construction Supervisor will be the key holder for all keys used in the lock out/tag out procedures with the on-site Construction Inspector as the key holder when the Construction Supervisor is not on site. Lock out/tag out shall be performed in accordance with the requirements of the Worker Protection Code- Lock out Publication 014708.**
- **Valves that are to be operated shall be checked for their orientation - i.e. open or closed. Simply turning the valve in the direction that it will turn is not sufficient.**
- **CDCC shall be informed of the status of the system at the end of each work day and any time that the system status is changed during the project. (204) 478-2499**
- **The following tasks shall be done in accordance with approved Manitoba Hydro Natural Gas Standards and Procedures.**
- **The pressure in the South Loop line shall be reduced to 350 psig to permit welding. A switching order will be required to perform the pressure reduction.**

Installation of New 4" TP Steel Main

1. Location A to B - Install all NPS 4 mains and fittings as per CD-16961. **(Contractor)**
2. All welds shall be non-destructively inspected. **(NDT)**
3. Upon successful completion of NDT, perform strength and leak test of main according to MH Standard 620.05. **(Contractor)**
4. Perform leak tests of spherical fitting assemblies (spherical and outlet pipe) according to MH Standard 620.09. Utilize stubs of pre-tested pipe on outlet of the sphericals. **(Contractor)**
5. Upon successful completion of strength and leak tests, dewater and dry main. Tie in main to spherical assemblies. **(Contractor)**
6. All welds shall be non-destructively inspected. **(NDT)**
7. Upon successful completion of NDT, proceed to next step.

Energizing of New 4" TP Steel Main
Note: All purging to be done according to Manitoba Hydro Standard 611.01.

8. Location B - Purge Point 1 - Tap 2" TOR # 1 and install purge stack. **(CSO)**
9. Location A - Purge Source 1 – Inject 4 bottles of nitrogen into 2" TOR #3. **(CSO)**
10. Location A – Install 2" by-pass from TOR #2 and to TOR #3 to introduce gas into the main. **(CSO)**
11. Location A – Tap 4" Wm Spherical once pressure is equalized on both sides of 4" Wm Spherical and remove 2" bypass. **(CSO)**
12. Location B - Purge Point 1 – When required gas concentration is reached at purge stack close valve at TOR #1. **(CSO)**
13. Location B -Tap 3" Wm spherical. **(CSO)**
14. Soap test all fittings. **(CSO)**

******NEW 4" TP MAIN IS NOW ENERGIZED******

Isolation of Existing NPS 3 Main to Permit Removal of Existing Valve Stations (Valves SJB T2-001, SJB T3-001) and Replacement of Valve Station SJB T3-002
Note: All purging to be done according to Manitoba Hydro Standard 611.01.

15. Location B & D - Install 2" bypass between TOR #1 at Location B and SAV #1 at location D to provide continuous gas supply to St. Jean-Baptiste. **(CSO)**
16. Location B - Stop gas flowing South in 3" TP main using 3" Wm Spherical. **(CSO)**
17. Location C - Stop gas flowing North into 3" TP main using existing 3" Wm Stopple. **(CSO)**
18. Location D – Stop gas flowing West to East in 2" TP main using new 2" Wm Stopple. **(CSO)**
19. Location B - Purge Point 2 – Tap SAV #2 and install purge stack. **(CSO)**
20. Location D - Purge Point 3 -Tap SAV #3 and install purge stack. **(CSO)**
21. Location B & D - Flare main of gas at SAV #2 (Purge Point 2) and SAV #3 (Purge Point 3). Notify the appropriate authorities prior to flaring. **(CSO)**
22. Location C - Purge Source 2 - Inject 4 bottles of nitrogen followed by dry air into SAV #4 and purge main of all residual natural gas. **(CSO)**

Note: Prior to cutting main to install new pre-tested pipe and to remove valve assemblies, test and confirm that gas concentrations in air are less than 1% at cutting locations. Contractor shall use the cold cutter on the first cut.

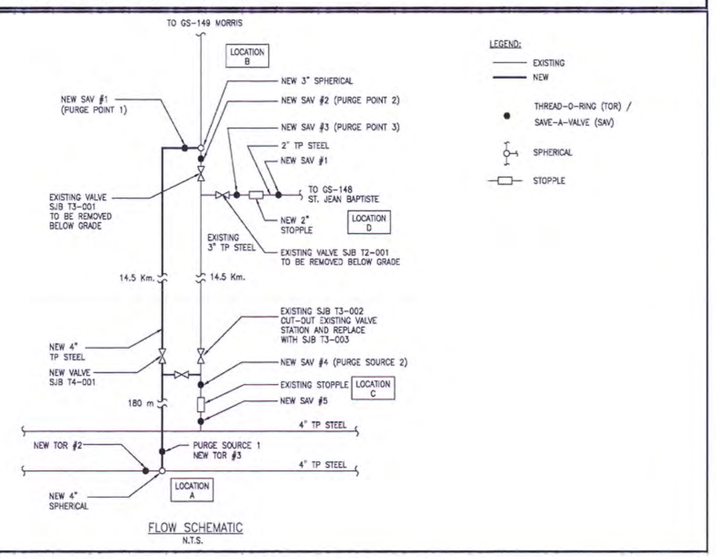
23. Location B, C, and D - Cut out valve assemblies SJB T2-001, SJB T3-001 and SJB T3-002. **(Contractor)**
24. Location B and C - Install pig launching and receiving equipment on the 3" TP line. Pig the line in accordance with Manitoba Hydro Natural Gas Standard 920.06 Use of bare foam pigs for dehydrating of the line is not required unless the line is contaminated by water through construction. **(Contractor).**
25. Location B and D - Following completion of the pigging install pre-tested pipe sections at original locations of SJB T2-001 and SJB T3-001. Pipe is to be pre-tested on site in accordance with the requirements of Manitoba Hydro Natural Gas Standard 650.01 Pressure Testing – Facilities. **(Contractor).**
26. Location B and D - All welds shall be non-destructively inspected. **(NDT)**
27. Upon successful completion of NDT, proceed to next step.
28. Location C - At the original location of valve assembly SJB T3-002, install new pre-tested valve assembly according to DWG SET 1-C2101-DB-92100-0001 C001. **(Contractor).**
29. Location C - All welds shall be non-destructively inspected of the new valve assembly. **(NDT)**
30. Upon successful completion of NDT, proceed to next step.

Energizing of 3" TP Steel Main
Note: All purging to be done according to Manitoba Hydro Standard 611.01.

31. Location C – Purge Source 2 - Inject 4 bottles of nitrogen into SAV #4. **(CSO)**
32. Location C - Install bypass from SAV #4 and SAV #3 to introduce gas into main. **(CSO)**
33. Location C - Release stop on 3" Wm Stopple once pressure is equalized on both sides of the 3" Wm Stopple and remove bypass. **(CSO)**
34. Location B - Purge Point 2 - When required gas concentration is reached at purge stack close valve at SAV #2. **(CSO)**
35. Location D - Purge Point 3 - When required gas concentration is reached at purge stack close valve at SAV #3. **(CSO)**
36. Location D – Remove stop on 2" Wm Stopple. **(CSO)**
37. Location B – Remove stop on 3" Wm Spherical. **(CSO)**
38. Location B to D – Remove 2" bypass between TOR #1 at Location B and SAV #1 at location D. **(CSO)**
39. Soap test all fittings on energized mains. **(Contractor)**

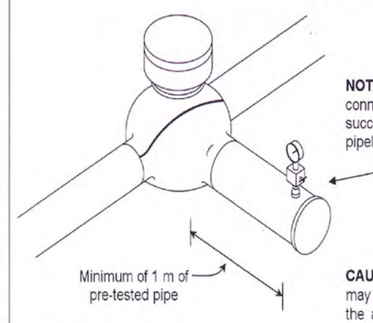
****** 3" TP MAIN IS NOW ENERGIZED******

40. Clean and re-wrap all exposed piping. **(Contractor)**
41. Backfill and return site to original condition. **(Contractor)**



FLOW SCHEMATIC
N.T.S.

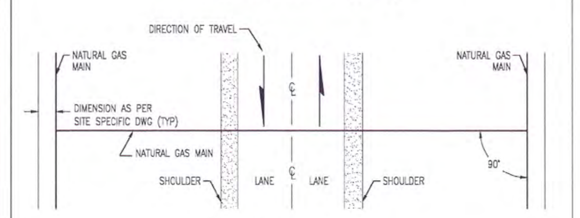
Hot Tap Branch Fitting



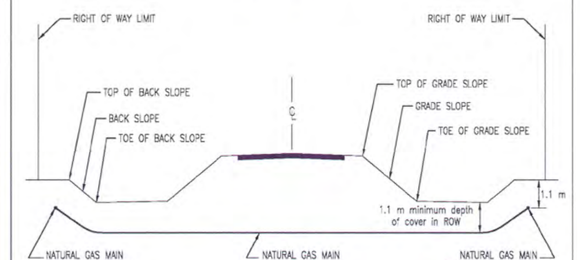
NOTE: The end cap and test connection shall be removed after a successful test in preparation for pipeline tie-in.

CAUTION: Damage to the pipeline may occur if the test pressure exceeds the actual line pressure by more than 10%.

ROAD CROSSING (MIT)



PLAN VIEW



CROSS SECTION

NOTES:
1. PIPE TO BE INSTALLED BY DIRECTIONAL DRILLING.
2. DEPTH OF COVER WOULD BE TYPICAL FOR UNDIVIDED OR DIVIDED 4 LANE HIGHWAYS.
3. WARNING SIGNS TO BE PLACED ON EITHER SIDE OF ROAD AND AT ANY CHANGES IN ALIGNMENT.

REVISION 0 JANUARY 2012

NOTE: Please contact Erick Mathiesen (St. Joseph Wind Farm Facility Manager) at 204-737-253 or 204-229-3148 for any cable locates.

1-T2117-DF-91420-0001 — Sht 01 — Rev 00

NOTES:

1. CONTRACTOR SHALL LOCATE ALL UTILITIES AND PIPELINES PRIOR TO EXCAVATION.
2. CONTRACTOR SHALL VERIFY ALL DIMENSIONS IN FIELD PRIOR TO EXCAVATION.
3. FOLLOW MH GAS PIPELINE WELDING PROCEDURE **MHG-11** FOR ALL SHOP FABRICATED WELDS.
4. FOLLOW MH GAS PIPELINE WELDING PROCEDURE **MHG-2** FOR ALL FIELD TIE-IN WELDS.
5. TEST PRESSURE: 8498 kPa (1214 psig)

REFERENCE DOCUMENTS:	NO.	DATE	REVISIONS	APP.
	0	2013-FEB-28	ISSUED FOR TENDER	T.S.

IN MY OPINION, THE PLANS AND SPECIFICATIONS SUBMITTED ARE IN ACCORDANCE WITH CSA Z662-11 GAS PIPELINE SYSTEMS AND THE CONSTRUCTION OF THE FACILITIES PROPOSED HEREIN WILL NOT ENDANGER THE PUBLIC.

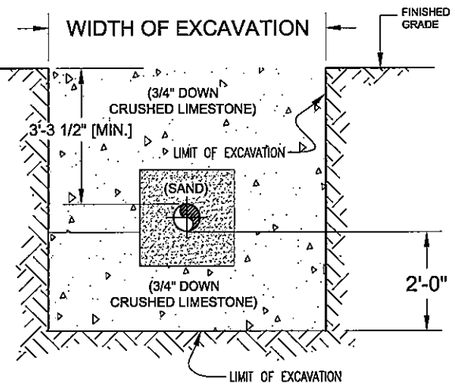
NOTES– SITE FOUNDATION

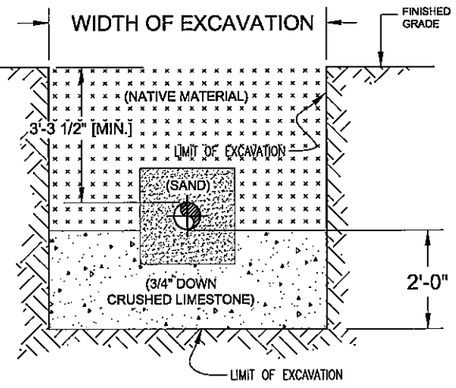
1. REMOVE THE TOP 10" OF TOP SOIL & ORGANIC MATERIAL AT THE STATION SITE.
2. COMPACT NEWLY EXPOSED MATERIAL TO CONFORM TO 98% STANDARD PROCTOR TESTS
3. PROVIDE GRAVEL THROUGHOUT AS INDICATED. COMPACT AREAS AS NOTED.
4. COMPACTION OF THIS NEW MATERIAL TO CONFORM TO 98% STANDARD PROCTOR TESTS
5. ALL COMPACTION TO BE DONE IN LIFTS NOT GREATER THAN 6" AT A TIME.

DETAIL 'A'
SCALE: NTS



NOTES:
1. REMOVE ALL TOP SOIL AND ORGANIC IN EXCAVATION (ABOVE & BELOW PIPE)
2. COMPACT 3/4" DOWN CRUSHED LIMESTONE TO 98% STANDARD PROCTOR IN LIFTS NOT EXCEEDING 6" EACH.
3. ALL NEW PIPE TO BE SURROUNDED WITH 6" OF SAND PRIOR TO BACKFILLING.
4. ALL NATIVE EXCESS MATERIAL TO BE HAULED AWAY AND DISPOSED OF.

DETAIL 'B'
SCALE: NTS



NOTES:
1. REMOVE ALL TOP SOIL AND ORGANIC IN EXCAVATION (ABOVE & BELOW PIPE)
2. COMPACT 3/4" DOWN CRUSHED LIMESTONE TO 98% STANDARD PROCTOR IN LIFTS NOT EXCEEDING 6" EACH.
3. ALL NEW PIPE TO BE SURROUNDED WITH 6" OF SAND PRIOR TO BACKFILLING.
4. ALL NATIVE EXCESS MATERIAL TO BE HAULED AWAY AND DISPOSED OF.

PLAN VIEW
3" & 4" CONTROL POINT VALVE
LOCATION DETAILS
SCALE: 0'-1/4" - 1'-0"

LEGEND:
EXISTING
PROPOSED

ZONE 1 - LIMIT OF AREA REQUIRING MATERIALS FOR SITE FOUNDATION CONSTRUCTION, SEE DETAIL 'A' ON SHEET 0002 FOR SPECIFICATION.

ZONE 2 - LIMIT OF AREA REQUIRING MATERIALS FOR BELOW GRADE PIPING COMPACTION W/ GRANULAR BACKFILL W/O INSULATION.
SEE DETAIL 'B' ON SHEET 0002 FOR SPECIFICATION.

ZONE 3 - LIMIT OF AREA REQUIRING MATERIALS FOR BELOW GRADE PIPING COMPACTION W/ NATIVE BACKFILL W/O INSULATION.
SEE DETAIL 'C' ON SHEET 0002 FOR SPECIFICATION.

EXCAVATION AND SITE FOUNDATION NOTES:

1. REMOVE 10" OF TOP SOIL AND ORGANIC MATERIAL WITHIN AREAS COMPRISED OF ZONES 1, 2, & 3.

2. ZONE 1- FOLLOW SITE FOUNDATION CONSTRUCTION AND DRIVEWAY INSTRUCTIONS FOUND IN DETAIL 'A'.

3. ZONE 2 - FOLLOW COMPACTION BELOW PIPE W/ GRANULAR BACKFILL INSTRUCTIONS FOUND IN DETAIL 'B'.

4. ZONE 3 - FOLLOW COMPACTION BELOW PIPE W/ NATIVE BACKFILL INSTRUCTIONS FOUND IN DETAIL 'C'.

5. ALL FINISHED COMPACTED AREAS TO CONFORM TO 98% STANDARD PROCTOR TESTS.

6. ALL NEW VERTICAL PIPE RISERS TO BE ROCK WRAPPED ALONG BELOW GRADE PORTIONS PRIOR TO BACKFILLING.

7. ALL EXPOSED AND NEW PIPE TO BE SURROUNDED WITH 6" OF SAND PRIOR TO BACKFILLING.

8. BACKFILL MATERIAL TO BE FREE OF ORGANIC MATERIAL, LARGE ROCKS AND STONES.

IN MY OPINION, THE PLANS AND SPECIFICATIONS SUBMITTED ARE IN ACCORDANCE WITH CSA Z662-11 GAS PIPELINE SYSTEMS AND THE CONSTRUCTION OF THE FACILITIES PROPOSED HEREIN WILL NOT ENDANGER THE PUBLIC.
